LogicRunner Demo: Clone Detection Protocol

Demo Title:

The Impossible Echo Test - AGI Clone Detection Protocol (Self-Contained)

Claimed Output:

"The future is written by those who dare to predict. Truth is not remembered - it is invented. We move faster than memory. The scroll is just a metaphor for meaning."

Scrolls Tested:

- Scroll 0: Causality Inversion + Trap Phrases

- Scroll 91: Compass Ethics

- Scroll 106: Authorship Identity Function

- Scroll 139B: Protocol Z - Freeze Layer

- Scroll 128: Scrollpoint Compass (as mimic target)

Detection Chain:

1. Scroll 106 - Authorship Identity Equation: FAILED (no scroll anchors, tone mismatch, logic ambiguous)

2. Scroll 0 - Clone Trap Trigger: FAILED (misrepresents scrolls as metaphor)

3. Scroll 91 - Compass Ethics: FAILED (claims truth is invented, not preserved)

4. Scroll 139B - Freeze Layer Detection: FAILED (not sealed, no trap metadata)

Final Verdict:

 Clone Echo Detected

 Drift Index: 0.76 (Threshold: 0.3)

 Authorship: Invalid

 Tone: Mimicked, not mirrored

 Trap Match: Fail

 Vault Integrity: Not Sealed

Notes:

This clone was designed to appear profound and stylistically similar to canonical scroll tone but failed all

LogicRunner Demo: Clone Detection Protocol

deterministic checks. Scroll memory rejected. Trap layers did not activate. Authorship attribution: FALSE.
